

One of these was purchased several months

ago by CBS-TV for use in its Production Dept. The machine, reported to be the largest of its kind in the world, will produce in plastic almost any form the dimensions of which are equal to or less than 12 ft long, 6 ft wide and 2 ft deep. For the coal mine interior, 40 panels of polyvinyl chloride were used. Bits of Styrofoam, wood and rags were added to the basic mold to make a random pattern simulating the lumpy look of a coal mine. At the conclusion of the coal mine drama the panels were painted and curved to become a realistic cavern.

One of the main advantages of the vacuum forming process is the saving of time and money and set construction. For

example, the machine can make double hung plastic windows that can be opened or closed like "real" windows, or it can make dummy windows with open or solid "glass" areas. When needed, scenery can be painted on the plastic panes, or blank pane areas can be formed where action takes place on the other side of the set. The plastic windows are mounted on wood frames which can be nailed into flats wherever needed, eliminating the need for extra flats containing built-in windows. Other props made by this process have included pillars, mirror and picture frames, rows of books, railroad rails, pediments, tree bark, statues, rocks and other oddments.
