

A black-background screen designed for electronic picture viewing under high ambient light conditions has been developed by Allen B. Du Mont Laboratories Inc., 750 Bloomfield Ave., N.J. Described as a "black phosphor" screen it is reported to be the first successful application of a black-background to a phosphor film. Applications include military, industrial and laboratory purposes where daylight viewing or viewing under bright light is necessary or desirable. It is immediately adaptable to airborne cockpit radar equipment. Pictured above is the screen retaining the image while the standard cathode-ray tube screen, at the left, is blanked out by high powered flood light.

**Permafilm Inc.**, 117 W. 48 St., New York 36, has granted a franchise to Magneson of Barcelona and Madrid, Spain, for the processing and distribution of its product. In addition to supplying motion-picture laboratories, the Spanish firm will package the product for the amateur market.
