Greetings From President Dwight D. Eisenhower	v
Resolution of the Congress of the United States.	v
The Role of the Society of Motion Picture and Television Engineers. <i>Glenn E. Matthews</i>	vi
	<i>Editorial Vice-President, SMPTE</i>
Conduct of the Congress. <i>Max Beard</i>	vi
	<i>Chairman of the Congress</i>
Committee of Honor	viii
National Delegates	viii
Technical Program Committee	viii
Topic Chairmen for Solicitation of Papers in U.S.A.	ix
Program Papers Review Committee	ix
Congress Session Chairmen and Vice-Chairmen	ix
Congress Committee for Local Arrangements	x
Board of Editors for the <i>Proceedings</i>	x
Foreword <i>J. S. Courtney-Pratt</i>	xi
	<i>Editor of the Proceedings</i>

SECTION A — Flash Light Sources

PAPER

A-1	Holdover in Xenon Flashlamps. <i>Harold E. Edgerton and David Cahlander</i>	3
	<i>Massachusetts Institute of Technology, Cambridge, Massachusetts</i>	
A-2	The Control of High Power Xenon Flashes by Magnetic Switching. <i>E. J. G. Beeson</i>	6
	<i>Associated Electrical Industries Lamp and Lighting Company, Ltd., Melton Road, Leicester, England</i>	
A-3	High-Intensity, Fractional Microsecond Light Sources <i>Philip Nolan</i>	11
	<i>Farrand Optical Company, 4401 Bronx Blvd., New York 70, New York</i>	
A-4	Millimicrosecond Light Source. <i>Heinz Fischer</i>	13
	<i>Air Force Research Division, Hanscom Field, Bedford, Massachusetts</i>	
A-5	Short-Duration Spark Light Sources of Extreme Luminance. <i>J. C. Moden</i>	17
	<i>Fighting Vehicles Research and Development Establishment, Chobham Lane, Chertsey, Surrey, England</i>	
A-6	Submicrosecond Flash Sources <i>Harold E. Edgerton, John Tredwell and Kenneth W. Cooper, Jr.</i>	29
	<i>Massachusetts Institute of Technology, Cambridge, Massachusetts</i>	
A-7	Physical and Technical Parameters of Flashtubes <i>I. S. Marshak and L. I. Shchoukin</i>	33
	<i>Laboratory of Flashlight Sources at the Electric Lamp Works, Radiotechnical Industry Ministry, Moscow, U.S.S.R.</i>	
A-8	Investigation of the Brightness of Spark Discharge Channels in Various Gases <i>M. P. Vanyukov and A. A. Mak</i>	41
	<i>Leningrad, U.S.S.R.</i>	
A-9	A Capillary Pulse Light Source Giving 40,000 K Blackbody Radiation <i>N. N. Ogurtzova and I. V. Podmoshensky</i>	46
	<i>Leningrad, U.S.S.R.</i>	

PAPER	PAGE
A-10 A High-Intensity Rectangular-Pulse Light Source for High-Speed Photography.	48
<i>Theodore Marshall, B. J. Crapo and Lemmuel L. Hill</i> <i>U.S. Naval Ordnance Laboratory, White Oak, Silver Spring, Maryland</i>	
A-11 Use of High-Explosive Flash for Photography by the Schardin System	49
<i>Louis Deffet and René Vanden Berghe</i> <i>Centre de Recherches Scientifiques et Techniques Pour l'Industrie des Produits Explosifs, Val du Bois, Sterrebeek (Brabant), Belgium</i>	
A-12 Explosive Flashlight: A New Development in an Explosive Light Source	54
<i>Jack Gershon and R. H. Stresau</i> <i>Armour Research Foundation of Illinois Institute of Technology, 10 West 35 Street, Chicago 16, Illinois; and Consultant,</i> <i>Star Route, Spooner, Wisconsin</i>	
A-13 High-Intensity Explosive Light Source.	56
<i>Zev Pressman</i> <i>Poulter Laboratories, Stanford Research Institute, Menlo Park, California</i>	
Discussion of Papers in Section A	61
 SECTION B — Photographic Materials and Optical Components 	
B-1 Flash Light Source Measurement.	63
<i>George H. Lunn</i> <i>Atomic Weapons Research Establishment, Aldermaston, Berkshire, England</i>	
B-2 A Photometric Study of Flash Light Sources Associated With Photographic Emulsions.	66
<i>Michel Philbert and Claude Véret</i> <i>Office National d'Etudes et de Recherches Aéronautiques, 29-39 Av. de la Division-Leclerc, Chatillon-sous-Bagneux, France</i>	
B-3 Reasons for Reciprocity Failure at Very Short Exposure Times.	72
<i>Henri Sauvenier</i> <i>Laboratoire de Physique Générale, Université de Liège, 1a Quai Roosevelt, Liège, Belgium</i>	
B-4 High-Speed Direct Recording Papers	76
<i>Heman D. Hunt</i> <i>Parlin Research Laboratory, E. I. du Pont de Nemours & Co., Parlin, New Jersey</i>	
B-5 A Comparison of High-Speed Photographic Films With Different Vigorous Development Conditions.	80
<i>Zev Pressman</i> <i>Poulter Laboratories, Stanford Research Institute, Menlo Park, California</i>	
B-6 Some Special Optical Systems and Methods.	87
<i>Raphael Boolsky</i> <i>Consultant, Avenue de Miremont 10, Geneva, Switzerland</i>	
B-7 Some Problems of Mirror Scanning Theory for Inclined Mirrors and Inclined Light Beams.	91
<i>A. S. Dubovik</i> <i>Institute of Chemical Physics, Academy of Sciences of the U.S.S.R., Vorobyevskoye Chaussée 2, Moscow, U.S.S.R.</i>	
Discussion of Papers in Section B	94
 SECTION C — Electronic Shutters 	
C-1 The Astracon Tube and Its Application to High-Speed Photography	95
<i>A. E. Anderson, G. W. Goetze, and H. Kanter</i> <i>Westinghouse Research Laboratories, Beulah Road, Churchill Borough, Pittsburgh 35, Pennsylvania</i>	
C-2 Very-High-Gain Image-Intensifier Systems and the Photography of Single Photons with Microsecond Time Resolution.	98
<i>Martin L. Perl and Lawrence W. Jones</i> <i>The University of Michigan, The Harrison M. Randall Laboratory of Physics, Ann Arbor, Michigan</i>	
C-3 Electronic Image Intensification: Image Intensifier Using Cathode-Conductivity	104
<i>R. A. Chippendale and J. R. Folkes</i> <i>Associated Electrical Industries (Woolwich) Ltd., Harlow Research Laboratory, Templefields, Harlow, Essex, England</i>	
C-4 Development of a Photo-Electronic Shutter Tube	110
<i>Leonard Mandel</i> <i>Imperial College of Science and Technology, University of London, England</i>	
C-5 Image-Converter Systems With Fast Image Group Repetition Rates	113
<i>Robert W. King, Jr., and John H. Hett</i> <i>Hett Associates, Inc., 24 Burton Place, Cresskill, New Jersey</i>	

PAPER	PAGE
C-6 Electron-Optical High-Speed Camera for the Investigation of Transient Processes. <i>V. S. Komelkov, Y. E. Nesterikhin and M. I. Pergament</i> <i>State Scientific Technical Committee, 14 Leninsky Prospect, Moscow, U.S.S.R.</i>	118
C-7 High-Speed Frame Photography With a Three-Stage Image Converter Utilizing Circuits With Mismatched Storage Lines. <i>V. A. Simonov and G. P. Kutukov</i> <i>State Committee for Electronic Technology, Kitaisky Proezd d. No. 7, Moscow, U.S.S.R.</i>	123
C-8 A Comparison of Kerr Cells and Image Tubes as High-Speed Shutters <i>George H. Lunn and E. D. Menzies</i> <i>Atomic Weapons Research Establishment, Aldermaston, Berkshire, England</i>	127
C-9 A Kerr Cell Camera With Synchronized Light Source for Millimicrosecond Reflected Light Photography. <i>George A. Theophanis</i> <i>Avco Research and Advanced Development Division, Wilmington, Massachusetts</i>	129
C-10 Kerr Cell Framing Camera <i>Willis C. Goss</i> <i>Lawrence Radiation Laboratory, University of California, Livermore, California</i>	135
C-11 Multiple Kerr Cell System With Square Shuttering Characteristic. <i>Lothar Liebing and Frank Früngel</i> <i>Dr.-Ing. Frank Früngel GmbH, Sülldorfer Landstrasse 400, Hamburg-Rissen (24a), Germany</i>	138
C-12 High-Sensitivity Television as an Aid to Low-Light-Level Photographic Recording <i>Bernhard A. Bang</i> <i>The Bendix Corp., Friez Instrument Division, Baltimore 4, Maryland</i>	141
Discussion of Papers in Section C	147

SECTION D — Flash X-Ray

D-1 A Fifty-Millimicrosecond Flash X-Ray System for Hypervelocity Research. <i>F. J. Grundhauser, W. P. Dyke and S. D. Bennett</i> <i>Field Emission Corp., 611 E. 3rd Street, McMinnville, Oregon</i>	149
D-2 An Installation for Triple X-Ray Flash Photography at 600 kv. <i>Jean Viard and Lucien Beaudouin</i> <i>Poudrerie Nationale, Sévran (Seine et Oise), France; and Commissariat à l'Energie Atomique, 69 rue de Varenne, Paris 7, France</i>	154
D-3 Megavolt Flash X-Ray Equipment <i>E. W. Walker</i> <i>Atomic Weapons Research Establishment, Aldermaston, Berkshire, England</i>	161
D-4 Theory of Operation of Flash X-Ray Tubes. <i>J. S. McVeagh</i> <i>Armament Research and Development Establishment, Sevenoaks, Kent, England</i>	162
D-5 High-Speed X-Ray Flash Cinematography of Small Objects <i>Frank Früngel, Heinz Alberti and Walter Thorwart</i> <i>Dr.-Ing. Frank Früngel GmbH, Sülldorfer Landstrasse 400, Hamburg-Rissen (24a), Germany</i>	170
D-6 X-Ray Flash Cinematography up to 12,000 Images/Second <i>A. Stenzel and Gustav Thomer</i> <i>Institut Franco-Allemand de Recherches, St. Louis (Haut-Rhin), France</i>	173
D-7 Application of Image Intensifier in Flash Radiography <i>Gustav Thomer and Rudi Schall</i> <i>Institut Franco-Allemand de Recherches, St. Louis (Haut-Rhin), France</i>	176
D-8 Measurements of the Density of Gas in an Argon-Discharge by Soft X-Ray Flashes <i>Karl Vollrath</i> <i>Institut Franco-Allemand de R. cherches, St. Louis (Haut-Rhin), France</i>	179
D-9 High-Speed Measurement of Shock Compressibility of Solids in the 1-Mb Range <i>Rudi Schall</i> <i>Institut Franco-Allemand de Recherches, St. Louis (Haut-Rhin), France</i>	184
D-10 High-Speed Radiographic and Optical Techniques Applied to Hypervelocity Impact Studies <i>J. William Gehring, Jr.</i> <i>Ballistic Research Laboratories, Aberdeen Proving Ground, Maryland</i>	188
Discussion of Papers in Section D	195

SECTION E — Unusual Techniques

PAPER	PAGE
E-1 Some Unconventional Methods of High-Speed Photography. <i>J. S. Courtney-Pratt</i> <i>Bell Telephone Laboratories, Inc., Murray Hill, New Jersey</i>	197
E-2 A Method of Improving Contrast When Copying Dissected Images. <i>J. W. McLaughlin</i> <i>Bell Telephone Laboratories, Inc., Murray Hill, New Jersey</i>	227
E-3 New Developments in the Courtney-Pratt High-Speed Camera. <i>M. B. Prudence</i> <i>J. Langham Thompson Ltd., 176 High Road, Bushey Heath, Hertfordshire, England</i>	231
E-4 Properties and Principles of Application of Lenticular Plates in High-Speed Photography . . . <i>B. T. Ivanov</i> <i>All-Union Scientific Research Institute of Cinematography, 47 Leningradsky Prospect, Moscow, U.S.S.R.</i>	234
E-5 Hexagonal Lenslet Arrays <i>S. P. Ivanov and L. V. Akimkina</i> <i>All-Union Scientific Research Institute of Cinematography, 47 Leningradsky Prospect, Moscow, U.S.S.R.</i>	235
E-6 Universal Image Dissection Camera With Continuous Access for High-Speed Photography <i>S. M. Provornov, O. F. Grebennikov, V. P. Gusev and S. M. Pertsev</i> <i>Institute of Cinematographic Engineers, Leningrad, U.S.S.R.</i>	236
E-7 The Printing of Underexposed Photographs by Means of "Optical Contrasters". <i>Michel Cloupeau</i> <i>Laboratoire de Recherches Electroniques, Institut du Radium, 11 rue Pierre Curie, Paris 5, France</i>	240
E-8 A Fast Venetian Blind Shutter <i>J. Kühne</i> <i>Bofors-Nobelkrut, Bofors, Sweden</i>	245
E-9 High-Speed Photography Using Ultraviolet Radiation to Eliminate Visible Light Masking in Self-Illuminating Events <i>R. Wayne Anderson</i> <i>The Dow Chemical Company, Midland, Michigan</i>	246
E-10 The Use of High-Speed Photography and Photoelastic Coatings for the Determination of Dynamic Strains. <i>Charles A. Cole, Jr., John F. Quinlan and Felix Zandman</i> <i>U.S. Naval Medical Field Research Laboratory, Marine Corps Base, Camp Lejeune, North Carolina; and lastly, Instruments Division, The Budd Company, Phoenixville, Pennsylvania</i>	250
Discussion of Papers in Section E.	262

SECTION F — Stereo, Spectra and Micro Studies

F-1 A Stereoscopic High-Speed Framing Camera Technique for the Study of Shaped- Charge Liner Collapse <i>Bradley O. Reese</i> <i>Poulter Laboratories, Stanford Research Institute, Menlo Park, California</i>	265
F-2 High-Speed Stereoscopic Photography. <i>V. V. Garnov and A. S. Dubovik</i> <i>Institute of Chemical Physics, Academy of Sciences of the U.S.S.R., Vorobyevskoye Chaussée 2, Moscow, U.S.S.R.</i>	269
F-3 Design and Application of a High-Speed Time Resolving Spectrograph <i>Donald Baker Moore and John K. Crosby</i> <i>Poulter Laboratories, Stanford Research Institute, Menlo Park, California</i>	273
F-4 High-Speed Time Resolved Spectroscopic Instruments. <i>Francis D. Harrington</i> <i>Optics Division, U.S. Naval Research Laboratory, Washington 25, D.C.</i>	277
F-5 High-Speed Photographic Studies of Electrically Exploded Metal Films and Wires <i>Louis Zernow, George Woffinden and Fulton W. Wright, Jr.</i> <i>Aerojet-General Corp., Downey, California</i>	283
F-6 High-Speed Motion-Picture Photography of Microscopic Phase Changes. <i>J. E. Benjamin and J. W. Westwater</i> <i>Division of Chemical Engineering, University of Illinois, Urbana, Illinois</i>	290
F-7 High-Speed Photographic Recording of Dual Data at High Magnification. <i>B. H. Amstead</i> <i>The College of Engineering, The University of Texas, Austin, Texas</i>	293
Discussion of Papers in Section F	295

SECTION G — Streak Cameras

PAPER		PAGE
G-1	An $f/1$ Streak Camera for Spark Studies in Both Ultraviolet and Visible <i>J. Dyson, R. F. Hemmings and R. T. Waters</i> <i>Associated Electrical Industries Ltd., Aldermaston, Berkshire, England</i>	297
G-2	Streak Camera Development at the National Research Council <i>E. H. Dudgeon</i> <i>Gas Dynamics Section, National Research Council, Ottawa, Canada</i>	303
G-3	The Improved $f/10$ Sweeping Image Camera: A Versatile Model for Explosive Research . . . <i>Berlyn Brixner</i> <i>Los Alamos Scientific Laboratory, University of California, Los Alamos, New Mexico</i>	309
G-4	A High-Speed Rotating Mirror With Greater Dynamic Resolution <i>Willard E. Buck</i> <i>Buck Instrument Co. and Consultant on Instrumentation, P. O. Box 930, Boulder, Colorado</i>	318
G-5	Model 200, Reflecting-Optics, Sweep Camera <i>Thure Anderson</i> <i>Lawrence Radiation Laboratory, University of California, Livermore, California</i>	319
G-6	Smear-Camera Techniques <i>T. P. Liddiard, Jr., and B. E. Drimmer</i> <i>U.S. Naval Ordnance Laboratory, White Oak, Silver Spring, Maryland</i>	322
	Discussion of Papers in Section G	327

SECTION H — Multiple Frame Cameras

H-1	The Multiple-Spark Camera in Studies Requiring Highly Detailed Photography <i>Hubert Schardin</i> <i>Institut Franco-Allemand de Recherches, St. Louis (Haut-Rhin), France</i>	329
H-2	Focal Plane Shutters and the Design of High-Frame-Rate Cameras <i>Sigmund J. Jacobs</i> <i>U.S. Naval Ordnance Laboratory, White Oak, Silver Spring, Maryland</i>	335
H-3	A Rotating-Mirror Framing Camera With Multiple Focal Plane Shutters <i>Sigmund J. Jacobs, J. D. McLanahan and P. F. Donovan</i> <i>U.S. Naval Ordnance Laboratory, White Oak, Silver Spring, Maryland</i>	341
H-4	A New Type of Ultra-High-Speed Framing Camera Combining a Rotating Mirror With a Film Drum <i>Tsuneyoshi Uyemura</i> <i>Institute of Industrial Science, University of Tokyo, Yayoi-cho, Chiba City, Japan</i>	346
H-5	VFK-ÚVOJM High-Speed Framing Camera <i>Jan Hampl</i> <i>Meopta Optics & Fine Mechanics Research Institute, Pířerov, Czechoslovakia</i>	350
H-6	Tripod-Mounted High-Speed Framing Camera <i>Richard J. Krumhansl</i> <i>Lawrence Radiation Laboratory, University of California, Livermore, California</i>	355
H-7	The CORE Camera: Continuous Receptivity — One Rotating Element <i>J. N. Whyte</i> <i>Armament Research and Development Establishment, Sevenoaks, Kent, England</i>	359
H-8	Applications of the Type C5 Rotating Mirror Framing Camera <i>K. R. Coleman and A. Skinner</i> <i>Atomic Weapons Research Establishment, Aldermaston, Berkshire, England</i>	362
H-9	High-Speed Intermittent Camera Using Multiple Shuttering of Each Frame <i>Robert L. Rodgers</i> <i>D. B. Milliken Co., 131 North Fifth Avenue, Arcadia, California</i>	365
H-10	Design Considerations for Rotating-Prism Cameras <i>John H. Waddell</i> <i>P.O. Box 52, Lansing 1, Michigan</i>	367
	Discussion of Papers in Section H	368

SECTION I — Applications — Ballistics

PAPER		PAGE
I-1	A Modern Reflection Shadowgraph System for Use in High-Velocity Aeroballistic Ranges <i>Paul H. Cords, Jr., Paul A. Thurston, and William R. Noyes</i> <i>U.S. Naval Ordnance Laboratory, White Oak, Silver Spring, Maryland</i>	369
I-2	New Technique for Measurement of Velocity of High-Speed Objects . . . <i>Donald A. Hall and W. W. Atkins</i> <i>U.S. Naval Research Laboratory, Washington, D.C.</i>	372
I-3	Application of the "Slit-Aperture" Camera for Observation and Data Acquisition in Projectile Studies. <i>Stanley M. Keen</i> <i>Instrumentation Laboratory, Development and Proof Services, Aberdeen Proving Ground, Maryland</i>	375
I-4	Underwater High-Speed Photography. <i>John V. Pflaum</i> <i>U.S. Navy Electronics Laboratory, San Diego, California</i>	379
I-5	Study of Chemical Reactions in Gases Emerging From the Muzzle of a Gun, by Means of High-Speed Photography. <i>Kartar Singh</i> <i>Institute of Armament Studies, Kirkee, Poona, India</i>	383
I-6	Microsecond Observations of the Dynamic Response of Explosives to Very High Rates of Loading <i>H. S. Napadensky, J. Savitt and R. H. Stresau</i> <i>Armour Research Foundation of Illinois Institute of Technology, 10 West 35 Street, Chicago 16, Illinois; and lastly, Consultant, Star Route, Spooner, Wisconsin</i>	385
I-7	A Photographic Technique for Observing the Behavior of Porous Materials When Rapidly Compressed <i>H. S. Napadensky, J. Savitt and R. H. Stresau</i> <i>Armour Research Foundation of Illinois Institute of Technology, 10 West 35 Street, Chicago 16, Illinois; and lastly, Consultant, Star Route, Spooner, Wisconsin</i>	388
	Discussion of Papers in Section I	392

SECTION J — Applications — Industry and Biology

J-1	The Photomicrography of Dilute Fiber Suspensions Moving at High Speed. <i>E. L. Scott</i> <i>Mead Research Center, The Mead Corporation, Chillicothe, Ohio</i>	393
J-2	High-Speed Photography in the Development of a New Form of Pulverizer. <i>Roland Jackson and D. V. Simpson</i> <i>British Coal Utilisation Research Association, Leatherhead, Surrey, England</i>	398
J-3	Fundamental Research and Theories in Canning Machinery. <i>C. C. Collier and J. J. Larish</i> <i>Food Machinery and Chemical Corporation, Hooperston, Illinois; and Ansco, Division of General Aniline and Film Corporation, Binghamton, New York</i>	401
J-4	A Variety of Applications of High-Speed Photography at the Outboard Marine Research Center. <i>Daniel H. Lamb</i> <i>Outboard Marine Research Center, Outboard Marine Corporation, Milwaukee, Wisconsin</i>	403
J-5	High-Speed Cinematography of Agitation and Mixing Processes (Film Lecture). <i>Werner Kraus</i> <i>Farbenfabriken Bayer A.G., Leverkusen-Bayerwerk, Germany</i>	408
J-6	Technique of Measurement of Blood Cell Velocity in Transparent Chambers in Animals. . <i>P. A. G. Monro</i> <i>Anatomy School, University of Cambridge, England</i>	408
J-7	Photographic Problems, Techniques and Instrumentation in Sea Animal Locomotion Studies. <i>Irving Rehman</i> <i>Consultant, Oceanic Research Division, Research Department, U.S. Naval Ordnance Test Station, China Lake, California</i>	408
J-8	High-Speed Photography in Medical Research (Film). . . <i>E. S. Gurdjian, H. R. Lissner and L. M. Thomas</i> <i>Neurological Surgeons, 801 David Whitney Bldg., Detroit, Michigan</i>	409
J-9	Biological Applications of High-Speed Photography (Film). <i>Eric Lucey</i> <i>Department of Animal Genetics, University of Edinburgh, Scotland</i>	409
	Discussion of Papers in Section J	410

SECTION K—Values and Problems in High-Speed Photography

PAPER	PAGE
K-1 Some Philosophical Aspects of High-Speed Photographic Instrumentation <i>Morton Sultanoff</i>	411
<i>Ballistic Research Laboratories, Aberdeen Proving Ground, Maryland</i>	
K-2 What Is the Sensitivity of a Photographic System? <i>Fred H. Perrin</i>	417
<i>Research Laboratories, Eastman Kodak Co., Rochester, New York</i>	
K-3 Detection of Particle Flux by a Scintillator, and the Use of Radiation as a Probe <i>K. R. Coleman</i>	424
<i>Atomic Weapons Research Establishment, Aldermaston, Berkshire, England</i>	
K-4 Value Received — The Use of High-Speed Photographic Techniques in Research and Industry <i>R. Wayne Anderson</i>	427
<i>Dow Chemical Co., Midland, Michigan</i>	
K-5 Study of Resolution Limits in High-Speed Framing Cameras <i>Thomas E. Holland</i>	430
<i>Beckman & Whitley, Inc., San Carlos, California</i>	
Discussion of Papers in Section K	438

SECTION L — Survey Papers

L-1 Applications of High-Speed Photography in Nuclear Reactor Development <i>Daniel S. Giroux and George W. Lindholm</i>	441
<i>Argonne National Laboratory, South Cass Avenue, Argonne, Illinois</i>	
L-2 Unusual Applications of Optical Instrumentation at NOTS <i>David F. Keyes, Carl Koerner, Wesley Lambert, George F. Silberberg and Darwin Tiemann</i>	443
<i>U.S. Naval Ordnance Test Station, China Lake, California</i>	
L-3 High-Speed Camera Facilities at the Lawrence Radiation Laboratory <i>David C. Oakley</i>	449
<i>Lawrence Radiation Laboratory, University of California, Livermore, California</i>	
L-4 Recent Evolution of Techniques for Ultra-High-Speed Photography at the Laboratoire Central de l'Armement <i>Paul Devaux</i>	453
<i>Laboratoire Central de l'Armement, Arcueil (Seine), France</i>	
L-5 A Review of Photographic Instrumentation for Ballistic Data Acquisition <i>L. E. Davidson</i>	459
<i>Engineering Laboratories, Development and Proof Services, Aberdeen Proving Ground, Maryland</i>	
Discussions of Papers in Section L	468

SECTION M — Systems for Control and Analysis

M-1 Quenching Spark Gaps as Trigger Elements in High-Speed Cinematography <i>Frank Früngel and Walter Thorwart</i>	469
<i>Dr.-Ing. Frank Früngel GmbH, Sülldorfer Landstrasse 400, Hamburg-Rissen (24a), Germany</i>	
M-2 Precision Speed Control for a High-Speed Camera <i>David A. Cahlander</i>	473
<i>Lincoln Laboratory, Massachusetts Institute of Technology, Lexington, Massachusetts</i>	
M-3 An Automatic Control System for a High-Speed Cine Camera <i>John G. G. Hempson</i>	478
<i>Ricardo & Co., Shoreham-by-Sea, Sussex, England</i>	
M-4 Remote Control Unit for High-Speed Multiple Motion-Picture Cameras <i>Fred Metlen</i>	481
<i>Boeing Airplane Co., 1705 Summit Avenue, Seattle, Washington</i>	
M-5 Pulse Program Generator <i>Jakob H. Hohl and Rolf F. Mürnger</i>	482
<i>International Business Machines Corporation, Research Laboratory, Zürich, Switzerland</i>	
M-6 Trigger Unit for High-Speed Camera <i>C. P. Johnson and S. A. Lott</i>	484
<i>Australian Defence Scientific Service, Defence Standards Laboratories, Maribyrnong, Ascot Vale, W2, Victoria, Australia</i>	
M-7 A Method for Analyzing High-Speed Films <i>Franz Topfer</i>	486
<i>15 rue Sohet, Liège, Belgium</i>	
Discussion of Papers in Section M	488

SECTION N — Flow Dynamics

PAPER	PAGE
N-1 High-Speed Photography Applied to High-Speed Aerodynamic Research at the National Physical Laboratory <i>R. J. North</i>	489
<i>National Physical Laboratory, Teddington, Middlesex, England</i>	
N-2 High-Speed Photography of Rapid Air Currents and Shock Waves by Means of High-Frequency High-Voltage Sparks <i>H. G. Patzke, Walter Thorwart and Frank Früngel</i>	498
<i>Dr.-Ing. Frank Früngel GmbH, Sülldorfer Landstrasse 400, Hamburg-Rissen (24a), Germany</i>	
N-3 High-Speed Photography of Liquid/Solid Impact <i>J. H. Brunton</i>	503
<i>Laboratory for the Physics and Chemistry of Solids, Department of Physics, University of Cambridge, England</i>	
N-4 A Study of the Structure and the Ultrasonic Emission of a High-Speed Air Jet by High-Speed Schlieren and Shadowgraph Techniques <i>François Canac and Marie Merle</i>	508
<i>Centre de Recherches Scientifiques, Industrielles et Maritimes de Marseille, 66 rue St.-Sébastien, Marseille, France</i>	
N-5 Photographic Investigation of a Pulsating Air Jet Impinging on a Heated Plate. <i>G. F. Cochrane, Jr., and R. G. Nevins</i>	510
<i>State University, Manhattan, Kansas</i>	
N-6 Photomicrographic Study of Atomization of Liquid Fuels in a Combustion Chamber. . . . <i>Willy Diamant</i>	513
<i>3 Avenue de la Marne, Champigny-sur-Marne (Marne), France</i>	
N-7 Photography and Analysis of Time Variation in Drop Size Distribution of a Liquid Spray <i>Marcus F. Heidmann</i>	519
<i>Lewis Research Center, National Aeronautics and Space Administration, 21000 Brookpark Road, Cleveland, Ohio</i>	
N-8 High-Speed Photography of Hypersonic Phenomena by a Schlieren Interferometric Method . . <i>H. Oertel</i>	525
<i>Institut Franco-Allemand de Recherches, St. Louis (Haut-Rhin), France</i>	
N-9 Investigation by Spark Cinematography of the Behavior Pattern of Vortices. <i>Heinz Reichenbach</i>	530
<i>Ernst Mach Institut, Freiburg im Breisgau, Germany</i>	
Discussion of Papers in Section N	535
Résumés	539
Zusammenfassungen	556
Bibliographical Descriptions of the <i>Proceedings</i> of the High-Speed Photography Congresses	575
Index to Participants in Discussions	576
Author Index	577
Index to Organizations, Institutions and Companies	578
Subject Index	579
