

1967) and Vol. 18 (July through December 1967). Order by title and by volume number at \$3.00 per volume.

Index entries provide the document announcement location in individual issues of Technical Translations by supplying the issue number, field/group, accession number for an author listing, a journal listing, and a report number listing. Publication of the Technical Translations announcement journal was discontinued in December 1967, and Volumes 17 and 18 conclude the series. All U.S. Government-sponsored translations are now announced in U.S. Government Research & Development Reports (USGRDR) and indexed in U.S. Government Research & Development Reports Index (USGRDR-I).

current literature

.....
The Editors present for convenient reference a list of articles dealing with subjects cognate to motion-picture engineering published in a number of selected journals. Photostatic or microfilm copies of articles in magazines that are available may be obtained from The Library of Congress, Washington, D.C., or from the New York Public Library, New York, N.Y., at prevailing rates.

PRINT 18,000 FEET PER HOUR WITH OUTSTANDING IMAGE QUALITY

You can boost your 8mm, Super-8, 16mm or 35mm output by as much as 5 times because of innovations like these:

- New ideas in head design—Offset Sprocket maintains perfect contact, registration at ultra-high speeds.
- Special hold-downs—permit high-speed printing even of damaged negatives...warn against excess tension.
- Positive start/stop within only ten frames.
- Straight-line control layout for maximum operator efficiency. Speed, illumination read from large meters.

The incredible speed of these contact printers actually improves image quality...takes fuller advantage of the pointlight source and the sharper image it produces. But the real 'magic' is in the head design. Its unique Offset Sprocket pulls film past the aperture, rather than pushing it as with others. Film cannot buckle, even at running speeds as high as 300 feet per minute. Precise head arc helps maintain intimate contact between negative and positive for exceptional registration and image steadiness. Choose from two models: VHS Mk. 600

series, for 1-light printing of color or B&W; or VHS Mk. 500 series Portable printer (measures only 25" x 13" x 11") for high-speed B&W printing in cramped areas. Both have full 2000-ft. capacity. Both have Timing Belt film drive to eliminate backlash, and to give you reliable service over literally hundreds of millions of feet of film. And both are available with a full line of accessories and options (sound head, loop elevator, dual feeds & take-ups, etc.) to tailor your printer for any application. Priced from \$3000. Write for brochure.

And now you can slit film three times faster

...as fast as 3000 feet per minute with accuracy of $\pm 0.015\%$. Table and power models with up to 2000-ft capacity. Extra-long 'floating film' channel maintains exceptional lateral stability, makes rub marks and scratches impossible. Massive $1\frac{1}{2}$ " diameter cutters cannot slip out of alignment...guaranteed to give a perfect cut for a minimum of 5,000,000 feet of film. Models for 8mm/Super-8 (double-16) and for 16mm (double 32mm) or specials. Priced from \$300. Write for details.

See for yourself! Send for sample films printed and slit on these machines. Or come see 'em at S.M.P.T.E. Show and Audio-Visual Show, Washington, D. C.
