

New advances in high-speed photography

The most recent advances in the technology of photo-instrumentation have been made available to the scientific community in the *Proceedings of the Ninth International Congress on High-Speed Photography*.

The volume includes the 107 papers presented at the Congress in Denver, Colorado on 2-7 August 1970, together with all pertinent discussion of the papers during the technical sessions. Subject areas covered in the volume are

holography and image-dissection cameras, lasers, rotating mirrors and streak cameras, light sources and x-rays, and high-speed photographic applications.

In addition, a Current Bibliography on High-Speed Photography, prepared by the Research staff of Eastman Kodak Company especially for the *Proceedings*, will prove valuable as a research tool. A report on the Congress, a list of delegates, and an index of authors and discussers complete the volume.

The book comprises 605 pages, 8½ x 11 inches, in hardbound edition. The price is \$40.00 each, with discounts to SMPTE members, libraries, and booksellers: 1 to 4 copies 20%; 5 to 49 copies 25%; 50 or more 33⅓%.

Society of Motion Picture and Television Engineers
9 EAST 41 ST., N.Y., N.Y. 10017

New Members

The following members have been added to the Society's rolls since the December 1970 *Journal*. Also listed are those regretfully reported as deceased since then. The designations of grades are shown below. An up-to-date list of the Sustaining Members appears on the outside back cover of each month's *Journal*. The members listed below complete the Society's roll as of February 11.

The Directory for Members, Part II of the July 1970 *Journal*, shows the geographic membership distribution by states included in the Sections.

13½ lb. heavyweight!

pound for pound, the most capable, most versatile professional 35 in the world!

Heavy jobs: More and more chosen as the sole production camera on theatrical feature films. And lighter jobs: the continued camera choice where hand-held, in-close, fast moving sequences generate the thrills and intensity of the story. Any job: the Arriflex 35 is a unique, universal "system" camera. It grows from a hand-held wild camera to complete blimped sound-stage configuration.

And in every use, no sacrifice of theater-quality, rock-steady footage. No question of its ruggedness and reliability. And no chance of losing the mood: Arriflex is fast—lenses mount instantly, lock rigidly with new Bayonet-Lock lens mount. Magazines change in 15 seconds. View-finder attachments, interchangeable motors, numbers of incidental accessories make Arriflex the master of science, documentary, drama. It's the source of inspiration and exploration for new filming styles and techniques. It's the single investment that pays multiple dividends.

Write for brochure.

SOCIETY OF MOTION PICTURE AND TELEVISION ENGINEERS

9 East 41st Street, New York, N. Y. 10017
(212) TN7-5410

Many large corporations and small businesses are contributing generously to colleges and universities. The men who head these businesses are urging others to join them—with larger investments—or by starting a company aid-to-education program.

Business needs college talent in increasing quantity. But rocketing costs are causing a financial crisis for colleges and universities that could impede educational progress.

If your business has not recently evaluated the self-interest importance of investing in higher education, it should do so now.

Tuition, on the average, covers but $\frac{1}{3}$ the cost of a college education. More help from more businesses is needed to contribute importantly to the other $\frac{2}{3}$.

Give to the college of your choice.

Special to management—a new booklet of particular interest if your company has not yet established an aid-to-education program. Write for: "How to Aid Education," Council for Financial Aid to Education, 6 East 45th St., New York, N. Y. 10017.

These men believe in the importance of excellent higher education.

They know it can't be maintained without increasing business support.

The new Stellavox Sp7 will become a giant in the recording industry.

All 8 lbs. of it.

Up till now, perfect stereo location recording meant lugging unportable portables.

So we've come up with a rugged precision instrument, the Swiss-made Sp7. It's small—8"x10"x3". It's light—only 8 lbs. with batteries. And, despite its size, Sp7's features measure up to any portable you're now using.

Plus giving you several advantages you'll get nowhere else, regardless of size.

Like four standard tape speeds. 3¾, 7½, 15 and 30 ips. It is also continuously variable from 0-30 ips.

Another exclusive: Our many tape head assemblies with up to four heads. They plug in. Are quickly exchanged in the field. And each one contains the components to equalize the electronics precisely for a particular tape speed, track configuration and tape oxide. With Neo-pilot for mono

and "Synchro-tone" for stereo sync recording!

Then there's our 10½" real adapter. It gives you more recording time than any portable ever.

Plus: hands-off automatic stereo level control, dual peak indicating meters, internal powering for two condenser mikes, external AC supply and battery charger, and an internal quartz generator.

We expect this tiny Stellavox Sp7 to live up to the highest hopes of the industry. Because you don't have to be big to be a giant.
