Are Ghost Images Confusing Your Customers' View?

Blurring the signals on oscilloscopes? Dimming the images on TV monitors or radar displays? Obscuring the data on computer terminal displays? Do your customers have to look twice at any of your cathode ray tube display devices to get the proper information?

Let OCLI Help You Clear Things Up!

HEA®—a high efficiency multilayer antireflection coating—reduces reflections over the visible range of the spectrum by a factor of 10 over uncoated glass. Deposited directly on the curved surface of a CRT or its faceplate, HEA will transform

(unretouched photograph)

The coating can be deposited on either acrylic or glass, is extremely durable and can be cleaned and handled with a minimum of care.

HEA for Display Devices is only one of OCLI's large family of HEA coatings designed to improve the view through nearly every type of visual optical system. Find out more about how OCLI can brighten images. Write to our Marketing Department, Technical Products Division.
