BEAT-FREQUENCY OSCILLATORS FOR MEASUREMENTS AND TESTS AT AUDIO FREQUENCIES

Since the entire audio-frequency range is covered by rotating a single dial, the beat-frequency oscillator is extremely useful for rapid studies of audio-frequency equipment. The General Radio Company manufactures two models of beat-frequency oscillators, one for alternating-current operation and the other operated from batteries.

TYPE 513-B (alternating-current operated) \$450.00

TYPE 613-A (battery-operated) 210.00

PAMPHLETS, BOOKLETS, AND CATALOGUES

Manufacturers of motion picture equipment and supplies are requested to send to the General Office of the Society copies of their descriptive pamphlets, booklets, and catalogues as issued. Notices of the issuance of this material will be published in the *JOURNAL*, advising the readers that the material may be obtained free of charge by addressing the manufacturers named. This editorial service has been established in order to acquaint readers of the *JOURNAL* with the commercial developments of the motion picture industry as quickly as they occur.
