- Wilson, Carlton F.**, Producer-Director, Imperial Oil, Ltd. **Mail:** 365 Bayview Ave., Apt. #6, Toronto, Ontario, Canada. (M)

Personals

Dr. Adolph H. Rosenthal, formerly Director of Physics for the Freed Radio Corp., New York, has been appointed Vice-President and Director of Research and Development. Prior to his association with Freed Radio, Dr. Rosenthal was engaged for many years in electronic research for American and British concerns. Best known among his 30-odd patents is the Skiatron or "dark-trace" cathode-ray tube which has had a wide application in television, motion pictures and military electronics. At one time, Dr. Rosenthal was engaged in research at the Einstein Institute in Potsdam, applying television methods to solar observations. He will supervise government development projects for which Freed has built enlarged laboratory facilities.

Louis Gerard Pacent, a Fellow of the SMPTE, has been awarded the Marconi Memorial Medal of Achievement for his pioneer work in radio and communication by the Veteran Wireless Operators Association. At the beginning of Mr. Pacent's career, he worked very closely with Marconi himself. Mr. Pacent was a pioneer in the manufacture of theater motion picture sound reproducing equipment, and his many installations in 1929 and 1930 gave impetus to the infant talking picture and made it possible for exhibitors to take advantage of the new art. He is now president of the Pacent Engineering Corp., New York. His many contributions to the war effort during World War II brought citations to his company.
