Chemical Corner

Edited by Irving M. Ewig for the Society's Laboratory Practice Committee. Suggestions should be sent to Society headquarters marked for the attention of Mr. Ewig. Neither the Society nor the Editor assumes any responsibility for the validity of the statements contained in this column. They are intended as suggestions for further investigation by interested persons.

Chamois Fabric "X-Lint" is a fabric impregnated with "Hycar" latex which has all the properties of chamois but wears longer and, the manufacturer states, is unaffected by chemicals ordinarily harmful to chamois. "X-Lint" does not have the ragged ends and thin spots of chamois. The manufacturer of this product is Loren Products Corp., 101 West 31st St., N.Y. 1, N.Y.

New Idea in Filter Cloths Dynel filter cloths are made of acrylic fibers and are claimed to be superior to most filter materials because they are supposed to have good dimensional stability, are mildew-proof, easy to clean and nonblinding. Inquiries are directed to The Filtration Engineers, Inc., Newark, N. J.

Task of Making Fixer Greatly Simplified The L. B. Russell Chemicals, Inc., 60 Orange St., Bloomfield, N.J., manufactures a single powder which, when dissolved in water, forms a complete, odorless acetic-acid, long-lasting fixer. This preparation is called Super-Fix. The company states

that film processed in this fixer will wash easily because of the proper adjustment of the pH and will have a well-hardened emulsion. Furthermore, the hypo which is used here is dehydrated, resulting in great reduction of bulk. This fixer powder eliminates the use of hypo crystals, acetic acid and all the other heavy fixer chemicals. This should be of interest to the smaller laboratory.

Floor Refinishing "Plastic Rock" makes a perfectly new, durable floor in forty-eight hours. It bonds well to concrete, wood and steel. It also is slipproof and fire resistant. The vendor is United Laboratories, 16801 Euclid Ave., Cleveland, Ohio.

Insect and Pest Control U.S. Industrial Chemicals has developed a new type of insecticide during World War II which they call "Lindane." It is claimed to be one of the most effective modern chemical insecticides. "Lindane" is effective against a wide variety of insects and is harmless to humans. The address of the manufacturer is 60 E. 42 St., New York 17, N.Y.
