

The Neuscope splicer, specially developed for use with CinemaScope film, has been announced by Neumade Products Corp., 330 W. 42 St., New York 36. Although the new splicer resembles the conventional Griswold splicer in appearance it has the smaller-sized pins, differently located, necessitated by the smaller sprocket holes of CinemaScope film.

It has also been found that the way to get a perfect splice in true alignment was by keeping the film locked in one position throughout the splicing operation. Splic-

ing procedure on CinemaScope film has until now meant removing the film from the jaws in the middle of the splice, turning it over, scraping the soundtracks from the back and replacing it in its original position before applying the cement. The Neuscope splicer enables the user to scrape the emulsion from the top of the film in the conventional manner and then remove the soundtracks from the back of the overlap without taking the film out and turning it over—it is locked in its original position throughout the entire splicing operation.
