

The African Rhinoceros – while defending
its young – charges after intruders at full speed,
and is utterly uncontrollable.

Just like the charging rhinoceros, audio and video signals are difficult to control by nature.

For more than 27 years, Leitch has led the industry in using engineering expertise to develop products that harness and direct a signal's power. Today, the company offers solutions for streamlining the analog to digital signal transition, including a new line of HDTV products.

Leitch's Digital Glue® products provide economical, digital interface solutions in simple, single-function modules. And DigiBus® is the industry's only control

 Digital Glue®

platform that allows broadcasters to customize their systems, giving them complete control of signal conversion, synchronization and compression. The ongoing development of innovative products like BO/S™, Leitch's unified Broadcast Operating System for the DigiBus frame, proves Leitch's commitment

to giving customers tools to control the signal.

Leitch products are recognized for their unmatched quality, flexibility and reliability in signal distribution, processing and control. The company's unrivaled customer service and breadth of product offering provides integrated solutions that extend beyond managing signals, to mastering them for optimal performance.

By providing powerful and comprehensive digital solutions, Leitch is leading the charge in the signal control industry.

{ But you can control its signal. }
