Contents

Preface	1
Executive summary	3
Systems summary	4
Compression summary	4
Wrappers and Metadata summary	6
Networks and Transfer Protocols summary	6
1. Introduction	8
2. Systems	11
2.1. Introduction	11
2.1.1. Systems of the future will do different things	11
2.1.2. Systems of the future will be quite different	12
2.1.3. New workflows will result from integrated control schemes	12
2.1.4. New types of system design are required	12
2.2. Request for Technology	13
2.3. Object model	14
2.3.1. Why object-oriented technology?	14
2.4. System model	15
2.4.1. Structure of the model	15
2.4.2. Activities	16
2.4.2.1. Pre-production	16
2.4.2.2. Acquisition & Production	17
2.4.2.3. Post-production	17
2.4.2.4. Distribution	17
2.4.2.5. Storage	17
2.4.2.6. Transmission & Emission	17
2.4.2.7. Archiving	17
2.4.3. Planes	17
2.4.3.1. Video Essence	18
2.4.3.2. Audio Essence	18
2.4.3.3. Data Essence	18
2.4.3.4. Metadata	18
2.4.4. Layers	18
2.4.4.1. Application layer	19
2.4.4.2. Network layer	19
2.4.4.3. Data Link layer	19
2.4.4.4. Physical layer	19
2.4.5. Control and Monitoring plane	19
2.5. Operations	20
2.5.1. Control	20
2.5.1.1. Strategic	20
2.5.1.2. Tactical	20

2.5.1.3. Peer-to-peer	20
2.5.1.4. Resource management	20
2.5.1.5. Physical control network issues	21
2.5.1.6. Multiple forms of implementation	21
2.5.1.6.1. Hierarchical	22
2.5.1.6.2. Peer-to-peer	22
2.5.1.7. Essential characteristics	22
2.5.1.8. Logical control layers	22
2.5.1.8.1. Transaction-based control protocols	22
2.5.1.8.2. Functional APIs	23
2.5.1.8.3. Transition to object-oriented studio control by means of proxies	23
2.5.2. Monitoring, diagnostics & fault tolerance	24
2.5.2.1. Feedback	24
2.5.2.2. Failure prediction	24
2.5.2.3. On-line / Off-line diagnostics	24
2.5.2.4. Fault tolerance	24
2.5.2.4.1. Redundancy	24
2.5.2.4.2. Segmentation	25
2.5.2.4.3. Monitoring and verification	25
2.5.2.4.4. Implementation	25
2.5.2.5. Content integrity	25
2.5.3. Data Essence and Metadata management	25
2.5.3.1. Layered model	26
2.5.3.2. File transfer	26
2.5.3.3. Streaming	26
2.5.3.4. Data Essence	27
2.5.3.4.1. Repetition rate of Data Essence	27
2.5.3.4.2. Registration of Data Essence types	27
2.5.3.5. Metadata	27
2.5.3.5.1. Layered structure	27
2.5.3.5.2. Minimum repetition rate of Metadata types	28
2.5.3.5.3. Registration of Metadata types	28
2.5.3.6. Permanence of Data Essence and Metadata	28
2.5.3.7. Data Essence / Metadata capabilities	28
2.5.3.7.1. Capability in storage systems	29
2.5.3.7.2. Capability in transport systems	29
2.5.3.7.3. Videotape storage	29
2.5.3.7.4. Datatape storage	30
2.5.3.7.5. Disk storage	30
2.5.4. Content multiplexing	31
2.5.5. Multiplexing of Essence into containers	32
2.5.5.1. Transferring Essence between multiplexes	32
2.5.5.2. How to deal with opportunistic data over transports	32
2.5.5.3. Multiplexing of different systems / formats	33
2.5.5.4. Statistical multiplexing considerations	33

2.5.6.	Timing, synchronization and spatial alignment	33
2.5.6.1.	Reference signals	33
2.5.6.2.	Absolute time reference	33
2.5.6.3.	Temporal alignment	33
2.5.6.4.	Timing constraints on compressed signals	34
2.5.6.5.	Latency and delay	34
2.5.6.6.	Spatial alignment	34
2.5.6.7.	Hybrid analog / digital facilities	34
2.6.	Interconnection options	35
2.6.1.	Development of templates	35
2.6.2.	Transfer definitions	35
2.6.3.	Hard real-time	36
2.6.3.1.	Play-to-air	36
2.6.3.1.1.	Video	36
2.6.3.1.2.	Audio	36
2.6.3.1.3.	Data Essence and Metadata	36
2.6.3.1.4.	Control	36
2.6.3.2.	Live-to-air	36
2.6.3.3.	Live recording	36
2.6.4.	Soft real-time	36
2.6.4.1.	Video and Audio (uncompressed)	37
2.6.4.2.	Video and Audio (compressed)	37
2.6.4.3.	Data Essence and Metadata	37
2.6.4.4.	Control	37
2.6.5.	Non real-time	37
2.6.5.1.	File transfers	37
2.6.5.2.	Control	37
2.6.5.3.	Streaming	38
2.7.	Migration	38
2.7.1.	Placement of existing protocols into the public domain	38
2.7.2.	Essential Common Protocols	38
2.7.3.	Interoperability between old and new systems	38
2.8.	Economic model	38
2.9.	Standards	39
2.9.1.	Work under way in the SMPTE	39
2.9.2.	Standardization efforts yet to be undertaken	40
2.9.3.	Summary of standards required	40
2.10.	References	40
2.10.1.	Object-oriented technologies	40
3.	Compression issues	42
3.1.	Introduction	42
3.2.	Image quality	43
3.2.1.	Coding method	43
3.2.2.	Sampling structure – SDTV	43

3.2.3.	Compression pre-processing	44
3.2.4.	Video data-rate – SDTV	44
3.2.5.	MPEG Group of Pictures	45
3.2.6.	Constant quality vs. constant data-rate	45
3.2.6.1.	Constant quality (VBR) systems	46
3.2.6.2.	Constant bit-rate (CBR) systems	46
3.2.6.3.	Interfacing VBR and CBR environments	46
3.2.7.	Editing	46
3.2.8.	Concatenated compression	47
3.3.	Quality levels	47
3.4.	Operational considerations	49
3.4.1.	Working with existing compression families	49
3.4.2.	Agile decoders	50
3.4.3.	Native decoders	50
3.5.	Family relations	50
3.5.1.	Tools available for intra-family transcoding	50
3.5.2.	Compatible intra-family record / replay	50
3.5.3.	MPEG at 24 frames-per-second rates	51
3.6.	Interfaces	51
3.6.1.	Status of interfaces for MPEG-2 and for DV / DV-based compression	51
3.7.	Storage	51
3.7.1.	Data-rate requirements	51
3.7.2.	Resource management	52
3.7.3.	Audio, Video and Metadata synchronization	52
3.7.4.	VTR emulation	52
3.8.	Interoperability	52
3.9.	Compliance testing	52
3.9.1.	Test equipment	53
3.10.	HDTV issues	53
3.11.	Audio compression	54
3.11.1.	Studio operations	54
3.11.2.	Compression issues	54
3.11.2.1.	Multi-stage encoding and decoding	54
3.11.2.2.	Coding frame structure	55
3.11.2.3.	Latency issues	55
3.11.2.4.	Mixing	55
3.11.3.	Use of Audio compression	55
3.11.3.1.	Contribution	55
3.11.3.2.	Distribution	55
3.11.3.3.	Emission	56
3.11.3.4.	Archiving	56
3.11.4.	Channel requirements	56
3.11.4.1.	Mono	56
3.11.4.2.	Stereo	56
3.11.4.3.	The 5.1 format	56

3.11.4.4. Recording of the 5.1 format on professional videotape recorders	57
3.12. Compression issues: recommendations and current status	57
4. Wrappers and Metadata	59
4.1. Introduction	59
4.2. Purpose of Wrappers	59
4.3. Overall concepts - terminology and structure	60
4.3.1. General	60
4.3.2. Storage, Streaming, File Transfer and editing of Content	60
4.3.3. Content structure	61
4.3.4. Essence	63
4.3.5. Metadata	64
4.3.6. Metadata characteristics	64
4.3.7. Overhead	65
4.3.8. Metadata Sets	65
4.4. General requirements	66
4.4.1. Wrapper requirements	66
4.4.1.1. Size of wrapped Content	66
4.4.1.2. Platform neutrality	66
4.4.1.3. Immutability and generation numbering	66
4.4.1.4. History	66
4.4.1.5. Support of transactions	66
4.4.1.6. Property rights	66
4.4.1.7. Compatibility and conversion	67
4.4.1.8. Extensibility	67
4.4.1.9. Other requirements	67
4.4.2. APIs	68
4.4.3. Breadth of application and Wrapper profiles	68
4.4.4. Framework of a solution	69
4.5. Metadata requirements	70
4.5.1. Metadata vision	70
4.5.2. Requirements for Metadata standards	70
4.5.2.1. Class rules	71
4.5.2.1.1. Classes 0-7: publicly-defined and due-process Standardized (a.k.a. Registered)	71
4.5.2.1.2. Class 8: registered as private with public description	71
4.5.2.1.3. Class 9: unpublished with no public description (user-defined, proprietary or experimental)	71
4.5.3. Registry	71
4.5.3.1. Registration Authority activities	72
4.5.4. Metadata Templates	72
4.5.4.1. Production planning	72
4.5.4.2. Acquisition and playback	72
4.5.4.3. Editing and mixing	72
4.5.4.4. Storage of consolidated programs	72
4.5.4.5. Emission	73
4.5.4.6. Archiving	73

4.6.	Unique Material Identifiers	73
4.6.1.	Standard UMID Core	73
4.6.2.	UMIDs as a linkage between Streams and Databases	75
4.6.3.	The UMID Core in Streaming applications	75
4.7.	Wrapper formats	75
4.7.1.	First Request for Technology	75
4.7.2.	Storage Mechanism and Second Request for Technology	76
4.7.3.	Interoperability of Wrapper formats	76
4.7.4.	Interchange	77
4.7.5.	Streaming and Storage Wrappers	77
4.7.6.	Repetition rates of Vital Metadata	78
4.7.7.	Streaming Wrapper formats	79
4.7.8.	Storage Wrapper formats	79
4.7.8.1.	Wrapper varieties	80
4.7.8.2.	Interchange Storage Wrapper format	81
4.7.8.3.	Content repertoire	81
4.7.8.4.	Data model	81
4.8.	Newly-identified work	82
4.8.1.	Interchange Storage Wrapper	82
4.8.2.	Wrapper profiles and Content repertoires	82
4.8.3.	Metadata Sets	82
4.8.4.	Essence format documentation	82
4.8.5.	Mapping onto transport mechanisms	83
4.9.	Conclusions	83
4.9.1.	Work in progress	83
4.9.2.	Which documents to hand over	84
4.9.3.	Note on proprietary technology	84
5.	Networks and Transfer Protocols	85
5.1.	Introduction	85
5.1.1.	File transfer and streaming	85
5.1.2.	Quality of Service considerations	85
5.1.3.	Reference Architecture	86
5.2.	File transfer methods	86
5.3.	Streaming methods	87
5.4.	Recommended transport systems for Content	88
5.4.1.	Serial Data Transport Interface (SDTI)	89
5.4.2.	ATM	89
5.4.2.1.	File transfer over ATM	89
5.4.3.	Fibre Channel	90
5.4.3.1.	File transfers over Fibre Channel	90
5.4.3.2.	Streaming over Fibre Channel	90
5.4.4.	IEEE 1394-1995 high-performance serial bus	90
5.4.4.1.	File transfers over IEEE 1394	91
5.4.4.2.	Streaming over IEEE 1394	91

5.5.	Other transport systems	91
5.6.	Bridging and Tunneling	91
5.7.	Recommendations for future work	91
5.7.1.	File transfers	91
5.7.2.	Streaming / mapping	92
5.7.3.	Standards for mapping the Content / containers into transport mechanisms	92
5.7.4.	Interfaces / networks	93
Annex A: Abbreviations and specialized terms (Glossary)		94
Annex B: Systems		108
B.1.	Object model tutorial	108
B.2.	The RFT: New systems management services	112
Annex C: Networked Television Production – Compression issues		127
C.1.	Introduction	127
C.2.	Compression families for networked television production	128
C.3.	Requirements for networked operation	129
C.4.	Television production based on DV compression	133
C.5.	Television production based on MPEG-2 4:2:2P@ML compression	146
C.6.	Supplement A: EBU Statement D79-1996 – Open standards for interfaces for compressed television signals	160
C.7.	Supplement B: EBU Statement D80-1996 – Compression in television programme production	160
Annex D: Wrappers and Metadata		162
D.1.	First Request for Technology	162
D.2.	Second Request for Technology	163
D.3.	Responses to the Requests for Technology	166
D.4.	Related Essence format documents	168
Annex E: Networks and Transfer Protocols - Reference Architecture for Content Transfer and Streaming		169
E.1.	Introduction	169
E.2.	File transfer and access protocols	170
E.3.	Streaming	190

Annex F: Acknowledgments	199
Annex G: Task Force participants	200
