

CARRIES A HEAVIER LOAD.

MOVES AT TOP SPEED.

NEVER LETS YOU DOWN.

As far as servers go, Leitch's VR® is a completely different animal.

Leitch's VR® is a rare breed, bringing together for the first time the key elements of size, speed and reliability. It's the only video server with our exclusive VR Technology which combines distributed video servers for redundancy with direct, unrestricted access to shared Fibre Channel storage. The result is simultaneous, real-time access for as many as 30 channels. VR Technology reigns supreme, you don't have

to worry about copying video, transferring files, or wasting disk space. And with VR Technology's redundancy software, you needn't be concerned about disk drive failures or hardware controllers. You'll see that "rare breed" is an understatement – the VR simply rules the broadcast kingdom. www.leitch.com
