

2 Reader Notes

This document is an initial attempt at defining an overall structure for an advanced studio control architecture. As work progresses in each of the architectural areas, additional *services* and *objects* will likely be identified that are not included explicitly in this overview. The components identified in this overview are by no means a complete set of components required for any final architecture.

Application specific terminology is used within this document. Terms that have specialized meanings within this document are introduced in italics.
