**SMPTE Technical Conference and Equipment Exhibit, Americana Hotel, New York City. Info from SMPTE Headquarters.**

The Camera Mart has announced a Post NAB Video Seminar which will be held shortly after the National Association of Broadcasters convention which will be held 9–12 April in Las Vegas. The three-day seminar will be of special interest to those who were unable to attend the NAB convention, the announcement stated. Some of the major manufacturers in the broadcast and ENG fields will exhibit and discuss their equipment. Further information (including the exact dates) is available from Cindi Becker, The Camera Mart, 456 W. 55 St., New York, NY 10019.

The International Scientific Week with the Theme of "Education in the Era of Technology" will be held 19–21 June in Klagenfurt, Austria. There will be three main symposiums — Engineering Education '78; Educational Television — Technique and Art; and Technical Media in Teaching Languages. Highlighting the event will be the MultiMedia Exhibition. Educational television and language laboratories will be shown and demonstrated. Further information is available from the International Society for Engineering Education, Universitätstrasse 67, A-9010 Klagenfurt, Austria.

## Installation of R-MOD (reel servo modification) Provides Tangible Benefits

- Automatic Search and Cue—Saves operator time
- Automatic End-of-Tape Stop—Saves video heads
- Constant Tension Tape Handling—Saves tape
- Electronic Tape Timer—Improves accuracy
- Faster Lockup—Consistent for any reel size
- Built-in Tape Cleaner—Saves tape and heads
- Remote Control—Ready for station automation
- Faster Acceleration—Improves editing time
- Extends VTR Life—Alternative to new machines
- Intelligent Interface—Universal for all VTRs

# EASTMAN 7250 FILM

**A NEW HIGH-SPEED FILM FOR "AVAILABLE DARKNESS!"**

If you've ever had to pass up a story for lack of light, we'd like you to know about new Eastman Ektachrome video news film high speed 7250 (tungsten).

It is a companion film to our Ektachrome video news film 7240 and uses the same Process VNF-1 procedures. It is, however, far faster (EI 400), and it can be pushed two stops and still provide you with an image of excellent broadcast quality.

It is an ideal solution for news assignments when additional lighting would be inappropriate or prohibitively expensive.

For available light, available twilight, or "available darkness," Kodak has a film to help you get the news. For literature or a call from one of our Sales and Engineering Representatives please write: Eastman Kodak Company, Dept. 640, Rochester, N.Y. 14650.

**Film is good news.**

## LA VEZZI SPROCKETS FIT THE SHAPE OF YOUR DRIVE IDEAS

When a requirement calls for moving perforated film, tape or charts, La Vezzi sprockets are specified where precise control of media movement is important.

There are good reasons for it! La Vezzi sprockets are designed for accurate and dependable operation. For example: Minute details are strictly observed in tooth-to-tooth accuracy. Each sprocket tooth is precision formed, exactly

sized and freed of all burrs to maintain media integrity. The diameter is cylindrically ground for good concentricity and abrasion-free contact with the perforated media.

Compare the reliability and accuracy of La Vezzi sprockets. They give drive designs an extra measure of confidence.

Our catalog tells all.  
Ask for it, or  
send us your specifications.
