

Forthcoming Professional Meetings

The Judd Memorial Conference on Color Metrics, sponsored by the Inter-Society Color Council, will be held 11-14 February 1979 in Williamsburg, Va. Topics will include psychophysiological aspects of color metrics, large and small color-difference evaluations, the relationship between line elements and physiological models of color vision, statistical implications, color metrics and color appearance systems currently in use, and sampling problems for color-difference evaluations. The program will include nine invited papers and a number of contributed papers. General Chairman of the Conference Committee is Rolf G. Kuehni. S. Leonard Davidson is Arrangements Chairman and Fred W. Billmeyer, Jr., is Publicity Chairman. Further information is available from Billmeyer at the Department of Chemistry, Rensselaer Polytechnic Institute, Troy, NY 12181.

A Conference on Television Measurement will be held 21-23 May 1979 at the Commonwealth Institute in London. It is being organized by the Institution of Electronic and Radio Engineers in association with the SMPTE, the Institute of Electrical and Electronics Engineers, and the Institute of Electrical Engineers. This is the second such conference to be held on television measurement. The first conference on television measuring techniques was held in London in the spring of 1970. The 1979 conference will provide participants with the opportunity of reviewing the progress that has taken place since 1970 in addition to providing discussions on the very latest developments as well as future developments likely to be completed during the next decade. The intention is to include within the scope of the conference contributions on the art and science of measurement of the many parameters of the television signal and to include also papers on the establishment of codes of practice and performance specifications to meet present and future requirements which, themselves, dictate the need for such measurements.

Papers will be presented on such subjects as: Digital Systems; Recording and Replay; Distribution and Satellites; RF, including Service Planning; Studio Techniques, including Codes of Practice; CATV/Cable Television; and Teletext, Viewdata and Associated Systems. Papers on other subjects related to the general theme of the conference will also be presented.

The Organizing Committee includes representatives from both broadcasting and industry. Further information is available from the Conference Secretariat, Institution of Electronic and Radio Engineers, 99 Gower St., London WC1E 6AZ, England.

The Seventh Cranfield International Conference on Mechanized Information Storage and Retrieval Systems will be held 17-20 July 1979 at Cranfield Institute of Technology. The conference will be organized by INSPEC, the Information Division of the Institution of Electrical Engineers, and will follow the format and ar-

rangements used in the six previous conferences. Cyril Cleverdon will be Joint Conference Director and will have the major responsibility for the development of the program and invitations to speakers. The main theme of the conference will be "Towards Intelligent Information Systems." Within this theme will be included question-answering and similar advanced systems, the intelligent use of information systems by any party in the communication/retrieval chain, and the use of non-bibliographic databanks and business, military, police and similar systems. Further information is available from Cleverdon at INSPEC, Station House, Nightingale Road, Hitchin, Herts SG5 1RJ, England.

The International Conference on Video and Data Recording will be held 24-27 July 1979 at the University of Southampton. The conference is being organized by the Institution of Electronic and Radio Engineers in association with the SMPTE, the Institution of Electrical Engineers, the Royal Television Society, the Institute of Electrical and Electronics Engineers, and the Audio Engineering Society. The aim of the conference is to promote a forum where recent advances can be considered through the presentation of original technical papers and discussions. Subjects will be: Theory of Recording Processes; Magnetic and Other Recording Media Techniques and Hardware; Coding Modulation and Signal Processing; Digital Audio Recording; Information and Archive Storage and Retrieval; and New Recording Techniques, Applications and Systems. Further information is available from the Conference Secretariat, Institution of Electronic and Radio Engineers, 99 Gower St., London WC1E 6AZ, England.

The Sony BVE-500A. It's the best editing decision you'll ever make.

Announcing the professional automatic editing control unit professional editors have been waiting for. The Sony Broadcast BVE-500A.

Already, the earlier BVE-500 has been accepted as the state of the art in control track editing by broadcasters around the world. In the new BVE-500A, we've made substantial improvements that increase the speed, versatility, and convenience of the editing process.

Compare these editing advantages with existing equipment, and consider the added creative capabilities you get with the Sony Broadcast BVE-500A.

1. BIDIREX control. The big news in the BVE-500A is BIDIREX: two self-return search dials that take the place of ordinary pushbutton search controls. Many control instructions have been built into these BIDIREX dials to allow an operator to shuttle tape in forward and reverse direction at various speeds.

BIDIREX eliminates mode selection error. And it gives Sony U-matic editing a true "film" feeling ordinary editing systems can't match.

2. Decision Prompter. The new BVE-500A uses lamps to prompt the operator to the mode and progress of all editing decisions.

Function lamps blink until the edit commands are made, then go automatically to "steady on." Even in a busy newsroom, with many interruptions, an operator can tell at a

glance the status of his last instruction as the BVE-500A prompts him for the next command.

3. Automatic Entry. The BVE-500A saves valuable time with a feature that automatically enters the "IN" point when the preview button is engaged.

If the operator has already selected an "IN" point, this auto mode has no effect; the editor may preview without disturbing his pre-selected "IN" point.

4. New Full Time Counter. The BVE-500A counts control track pulses from -79 minutes through 0 to +79 minutes. An operator need not concern himself with the count when he initiates an editing sequence.

5. Short Pre-Roll. When used with external sync, pre-roll is reduced from five seconds to three seconds, a further time-saving advantage.

6. Cue Control. The BVE-500A features built-in cue record and erase. This 1kHz tone is recorded on Audio 1, and is useful for both auto control systems and pre-cueing the tape to air.

These are just a few of the new BVE-500A features.

Others include auto shut-off, external interface of control logic, manual edit capability, and more. You can see them all in action when you ask for a demonstration of this versatile new editing control unit. To do that, just contact your nearest Sony Broadcast office.
