## RCA's all-new PM-85SL Dual Sprocketed Reproducer: quality and economy are only the beginning.

Say goodbye to time-worn conventional dual dubbers that have grown older but not much better.

Say hello to the all-new PM-85SL Series Dual Magnetic Reproducer—a fresh approach to function, design and packaging. The result: quality, economy, versatility and performance that make the servo-controlled PM-85SL an outstanding value for film and tape post-production sound processing. Consider these advantages:

- Servo-driven interchangeable sprockets for 16 and 35mm film.
- Automatic speed and equalization change for 16 and 35mm film.
- Built-in electronic interlock facility.
- Provision for adding erase and record facilities.
- Multi-track expansion—up to 12 tracks.
- Transfer capability at 2 times cine speed.
- Selectable 24/25 fps operation.
- All-new audio electronics.

The PM-85SL is the newest from RCA Photophone Systems, the people with the broadest line of sound-on-film and sound-for-tape systems. For information, write RCA, 2700 W. Olive Avenue, Burbank, CA. 91505, U.S.A.

# HI-BAND U-format VTR

## “Quad” Quality in a $\frac{3}{4}$ ” Format

The model HBU-2860 (Hi-Band U-format video cassette recorder) is a modified SONY VO-2860 with Recortec electronics mounted on top of the unit. The modification provides direct hi-band video recording made possible by tripling the scanner speed and the linear tape speed.

**Quality**—At the 1200 ips head-to-tape speed the HBU video quality is as good as the “quad” or the new one-inch format. Professional audio quality is also obtained with this modification.

**Convenience**—Standard and widely available 3/4-inch video cassettes for the HBU allow for simple loading, handling and storage.

**Dependability**—The HBU does not alter the U-type recording format and thus takes advantage of the proven interchangeability of the U-type recorders.

**Economy**—Lowest cost in equipment, media and operations for any Hi-Band VTR.

**Availability**—Ready for delivery at the introductory price of \$14,500 direct from Recortec.

Whatever the speed—Micro-Demand meets the need.

## Filmline's Citation Series Processors with Micro-Demand Drive.

Model DC28-35/16

Now any lab regardless of size, can have the quality and reliability of Micro-Demand, at prices geared to the volume of its operation.

Now the patented Micro-Demand film transport system comes in a full line of Filmline continuous, commercial film processors. Priced from \$8,900. With speeds from 7 FPM to 325 FPM.

Introduced in 1968 in its "Custom Line" machines for professional commercial labs Micro-Demand remains the most advanced demand drive transport system yet devised for film processing.

Micro-Demand dependability is outstanding—it will run 24 hours a day, seven days a week, at top speed, with virtually no maintenance.

The inherent design of the Micro-Demand system allows the use of conventional film rollers and bearings, eliminating the need for fragile plastic spring bushings, eccentric wob-

ble rollers or other mysterious contrivances. "Push-Button" operation and reliability allows the operator to perform other functions while the machine is running.

All Filmline processors use stainless steel construction throughout except where other alloys or formulations are recommended or proven superior.

Every Filmline machine is designed for "Zero Down Time" and backed by a superb performance record compiled in over 25 years of continuous service to the industry. Twenty-five years in the forefront of processing machine design and innovation.
