THE VIDEO REVOLUTION

is alive and well, and living in Hollywood

INTRODUCING VIDEOLA® . . . the video Moviola. A new concept in film-to-tape transfer, VIDEOLA employs the remarkable FLICKERLESS PRISM™ optics to give you performance and flexibility not available with any other system . . . at any price.

Imagine a video picture without a sign of flicker or jitter, with frames *dissolving* one into the next. Imagine the ability to vary film speed without regard for TV synchronization from still-frame to six or ten-times sound speed. Imagine interchangeable 16mm and 35mm transports, and the ability to run separate magnetic tracks as well as composite prints. And imagine having the picture resolution of the finest video camera.

As a bonus, you get the features and flexibility of a Moviola film editor and the capacity for 3000-foot film reels. Color and density corrections are available at the turn of a knob. Running print or irreplaceable original, positive or negative, VIDEOLA babies your

film-with smooth *continuous* motion and with recessed surfaces in all critical film handling areas.

Whether you're doing direct broadcast, assembling and editing or sending videocassettes of dailies back to location, check the advantages you get only with VIDEOLA. Just ask and we'll send complete specifications and surprising low prices.
