WINDOW; PERFORMANCE
MATCHED TO VPR-6.

Now, Here It Is. The New VPR-6.

When hundreds of users worldwide told us what they wanted in a one-inch VTR, we listened closely and then designed and built it. It's our new VPR-6, the easiest VTR to operate, service and maintain of any in its class. And it's in the price/performance ratio that most users want.

Smart, yes. Complicated, no.

Intelligent but not intimidating, the new VPR-6 offers features that allow you to get the job done more productively. For example, virtually all machine setup procedures can be done at the highly efficient control panel. Most board-edge controls typically found in VTR's have been eliminated.

You insisted on fast but gentle tape handling... the VPR-6 shuttles tape at speeds approaching 500 ips and handles all reel sizes from spot to 2 hours with equal precision and gentleness. The servo microprocessor senses when the end of the tape is near and slows down the reels and scanner and unthreads the tape gently.

You asked for power-down memory... so we built in a long-life battery to protect setups, edit and cue points and all editor configuration parameters.

"Make it easier to troubleshoot," you said, and we built in an extensive diagnostics system that constantly monitors many system conditions and warns you if a fault occurs. You can even run from the control panel a diagnostic routine using a logic probe to test every IC in direct communication with the two microprocessors.

A tried and true transport

You demanded reliability. Not wanting to tamper with success, we borrowed the tape transport and mechanical

printed wiring boards and backplane connectors throughout. The modular package allows convenient access to any part of the VTR for easy maintenance.

A TBC to Match

Because you wanted play speeds from -1 to 3X normal and picture in shuttle, we also developed the new TBC-6 digital time base corrector, performance-matched to the VPR-6. Its 32-line memory and 28-line correction window are the largest in any TBC appropriate for a VTR of this type.

State of the art editing

So much for recording and playback, how about editing? The VPR-6 has all the capabilities you asked for, including

split audio-video auto edit and auto tag. RS-422 serial communications capability lets VPR-6 function efficiently in a state-of-the-art editing system with the Ampex ACE and other edit controllers.

First-rate audio

"Make audio better," you said, and we did. The VPR-6 has audio (as well as video) confidence playback. The audio system also offers high quality stereo phase and an optional fourth audio channel for EBU systems.

Selection of styles

Most users may agree on capabilities, but you prefer a variety of configurations to choose from. So, we offer the VPR-6/TBC-6 in four console styles as well as tabletop and rackmount versions. Many Ampex video accessories work with it, including some you may now own.

In production now

The VPR-6 is too good to wait for, so it's already in factory production.

Ask your Ampex video sales engineer

design of our reliable and proven VPR-80. We also eliminated most wire harnesses in favor of more reliable

to quote price and delivery for any model in any world standard, and watch his face light up!

Improved 982 The Diamond Print Film

Improved 982: The Purest Among Its Likes

Improved GEVACOLOR® Print Film 982. The film that reproduces colors as they really are – purer and more saturated, defining the slightest change in tone textures, clearing up highlights and intensifying blacks. It is the print film that shows you the colors as you have always wanted them.

Improved 982: The Time-Resistant Print Film

Improved 982 continues the AGFA-GEVAERT tradition of manufacturing films that ensure long-lasting color images. It is the print film that withstands the test of time, and does it even more so on GEVAR base. GEVAR base means - 0.12mm polyester safety. Improved 982 on GEVAR base – if you have used it once you will certainly use it again.
