Leading Edge Challenges For Television Research Engineers

A unique opportunity is available at RCA Laboratories in Princeton, New Jersey, for an engineer to design digital video circuits and systems for high-definition TV, digital television receivers, direct broadcast by satellite, and other advanced television formats.

This position requires a self-motivated person who enjoys responsibility for projects such as the development of complex digital processors from concept through completion. The individual selected must have the ability to use modern digital design techniques including programmable logic analyzers, computer simulation and VLSI.

The successful candidate will have a masters degree in electrical

engineering with strong emphasis on digital signal processing and communication theory. Background should include television design, high speed logic design and computer programming.

RCA Laboratories offers competitive salary and benefits programs, along with a modern work environment in a comfortable, rural setting. For prompt consideration, forward your resume including salary requirements, to:
