Instrumentation Marketing NAC Eyemark recorder

video cameras to record continuous eye movement. Three cameras are used, one records the field of view and two record the focal points of the right and left eye. These are overlaid on the field of view by the use of symbols. A sensor automatically tracks each eye to transmit these symbols. The three video signals are relayed to a controller, and then to a videotape recorder, video monitor, or data output unit for computer analysis.

Vertical rack cabinets for video and audio equipment have been announced by The Winsted Corp., 9801 James Circle, Minneapolis, MN 55431. The racks are available with 24½, 35, or 70 in. of usable rack space. All models feature removable side panels for easy installation and convenient servicing of electronic equipment. Ventilating louvers on top and base allow circulation to keep the electronics cool.

## THE RIGHT PRICE

**"We didn't have a fortune to spend on processors," states Stan Nalski of Film Craft Laboratory, Detroit, MI, "but our volume necessitated good equipment."**

The processor that Film Craft finally selected was an Allen. Allen . . . quality equipment at the right price. Features like the dependable ATA film transport system is one example of built-in value. Solution and energy conservation systems are another, as are digital speed and temperature readouts. Automatic load accumulators, 316 SS and titanium throughout, and removable racks are other advantages. All help to keep cleanup and maintenance to a minimum. But our reputation for giving good value is only part of what Allen has to offer, we are known for great service and technical support, too. For details, send for literature or talk with an Allen Rep.
