

SMPTE's AMI Conference in Chicago Brought Motion Imaging Advancements to Attendees

February 26-28, 2004—Fairmont Hotel, Chicago

Chicago was this year's select city to host SMPTE's Advanced Motion Imaging Conference, held in February at the Fairmont Chicago. Experts, engineers, and field users came to learn the latest initiatives in motion imaging technology.

The Conference sessions were broken into key technologies that have recently undergone marked technological advancements. Included were Acquisition Systems Parts I & II (Lenses and Imagers), Quality and Measurement Systems for Advanced Motion Images, The Film—Electronic Interface, Distribution Issues—The Broadband Web, DTV, and Packaged Media Advances in Displays for Television and the Cinema.

The conference's annual Get-Together Luncheon proved successful, as always, with keynote speaker Mark Richer, president of ATSC, addressing attendees.

Well attended, enlightening, and educational, the conference met SMPTE's standard of delivering top-notch information to professionals in the motion imaging industry.

SMPTE would like to thank to the following members of the Chicago Section for their time and efforts:

Steve Robinson
Donald Adydan
Howard Ellman
Scott Keiffer
Dave Melone
Ed Shrider
Al Cherne

We would also like to once again thank the companies whose sponsorships contributed to the success of the AMI Conference: Avid, Azcar, CBS, Fox, Sony, Screen Magazine, and Qvis.
