

SMPTE FORUM 2015

Produced in partnership with
the FKTG with collaboration from the
EBU's Technology and Innovation group

7-8 May 2015

Register Now: smpte.org/forum2015

European broadcasters and studios are exploring this new landscape of web delivered media while new media players join the market.

What does this mean for the traditional content creators and distributors and what is the technological impact?

Factors as wide as EU policy, net neutrality, copyright, mining "Big Data" are shaping the possibilities in the complex European market and redefining how the industry engages its audience. These and many more topics will be discussed as we explore internet entertainment technologies and look at where we are heading in the brave new world of web media.

The Forum is an essential event for engineers, creatives, and researchers focused on future of media over the Internet.

conference venue:

Fraunhofer-Forum Berlin
Anna-Louisa-Karsch-Str. 2
10178 Berlin, Germany

Program Committee:
