

# Destination IP

Proven innovation that gets you there.

## HYBRID IP ROUTING

## HYBRID IP CONTROL

## HYBRID IP MONITORING

## HYBRID IP PROCESSING

Powered by Zenium™

When it comes to the IP transition, Imagine Communications forged the path.

We were the first to design a standards-based SDI/IP router. The first to process uncompressed UHD signals over IP using SMPTE ST 2110. And today, we offer the industry's most scalable software-defined IP processing solutions — all market proven and ready to deploy.

Our award-winning, open-standard platforms can take your operation from full SDI to full IP at whatever pace works for you, while ensuring that today's investment can support tomorrow's business.

Your path. Your pace.  
**IP solutions that evolve with you.**
