

Now you can convert your existing film library into Ultra HD for HDR digital broadcast in 4K!

Cintel is the world's most trusted name in film scanning. The Cintel Scanner lets you scan 16mm and 35mm film so you can be ready for high resolution streaming and 4K digital broadcasts! You get realtime film scanning in an advanced design that's gentle on your delicate film, along with DaVinci Resolve Studio for clean up work and color grading, so your new digital masters will look better than ever!

Convert Existing Film to Ultra HD

Consumers are buying more Ultra HD televisions than ever and the demand for high resolution, high dynamic range content is growing fast! The native resolution of 35mm film is 4K, which means there's over 100 years of content just waiting to be scanned. Cintel is the fastest way to convert film into stunning Ultra HD for streaming and digital broadcast!

Legendary Cintel Quality

With over 75 years of experience, you can trust Cintel with your delicate film. Cintel scanners feature a bright spherical RGB LED that protects film from thermal stress and fading, while also reducing the visibility of dust and scratches. In addition, digital servos gently guide your film through the scanner for realtime scanning.

Create 4K HDR Digital Masters

The included DaVinci Resolve Studio software lets you control Cintel via Thunderbolt. You get DaVinci Resolve's renowned color grading tools, along with support for HDR10 and Dolby Vision so you can create HDR digital masters. It's the perfect way to prepare Ultra HD content for AppleTV 4K and other high resolution HDR broadcast services.

Advanced 4K Scanning

Cintel scanners feature a 4K image sensor with a native resolution of 4096x3072, making it ideal for scanning all film formats from standard 16mm all the way up to Super 35mm. You get support for 2, 3 and 4-perf film gauges, Thunderbolt connectivity and an optional Audio and KeyCode Reader with 16mm magnetic audio, 16mm and 35mm optical audio and KeyCode!
