

## Hong Kong September 2020

**W**ith a new social norm sweeping fast, the Hong Kong (HK) Section stepped-up its game to adapt to the post-COVID-19 epidemic era by hosting a virtual seminar in the local dialect. Ensuring our members have an occasion to exchange thoughts with the industry affiliate while keeping the local professional community fully informed on the latest standard and technology offerings to combat the ever-challenging business climate.

The webinar began with a video recording of John Mailhot, chief technology officer Networking & Infrastructure Imagine Communications, a key contributor to the SMPTE ST 2110 standard. Mailhot welcomed attendees and mentioned that some minor updates would be made to the standard after a few years of experience implementing with more than seven vendors during recording. Speakers Andy Hui and Brain Tang walked through the standard from concept and gradually to the in-depth technical aspects while sharing some insights into their experience on implementing projects aboard. The webinar concluded with an invitation to the upcoming seminar on PTP/ST 2059 standard, which is closely related to ST 2110.
