## Color and Dynamic Range HDR Transforms

New Firmware v4.0

## Simultaneous HDR and SDR Real Time Production

Powered by the Colorfront Engine™ with proven AJA hardware technology, FS-HDR serves as either a 1-channel up, down, cross-converter and frame-sync for 4K/UltraHD/2K/HD with HDR and SDR transformations or in 4-channel mode, offers four channels of 2K/HD with HDR and SDR transformations. Film Mode offers controls and looks for narrative work with Live Mode for broadcast providing nit level control up to 4000 nits and more. Dynamic LUT support for 4K and multi-channel HD, BBC LUTs v1.3, and user custom LUTs uploads provide all the flexibility you need for real time HDR production.
