Color and Dynamic Range HDR/SDR Transforms

New Firmware v4.1

Expanded BBC and New NBCU LUT Support

Powered by the Colorfront Engine™ with proven AJA hardware technology, FS-HDR serves as either a 1-channel 4K/UltraHD/2K/HD up, down, cross-converter and frame-sync with HDR and SDR transformations, or 4-channels of 2K/HD conversions and transformations. New v4.1 firmware features increased frame buffer depth, updated v1.5 BBC HLG LUTs, new NBCU LUTs, expanded Closed Captioning support, and a new ability to pass-through or translate critical ancillary data – even while performing a conversion.
