

Now you can record 4 channels of 12G-SDI in H.264, H.265, ProRes or DNx!

The HyperDeck Extreme 8K HDR features innovations such as space saving H.265 files, built in scopes, optional internal cache, 3D LUTs, native 8K and HDR support! The large touch screen ensures a perfect view of your recording as well as control over all deck settings. HyperDeck Extreme 8K can also record 4 channels directly to network storage, perfect for ISO recording and broadcast replay!

Record 4 Channels in a Single Unit

Now you can build a rack of HyperDeck Extreme recorders that can record multiple camera channels into a single folder on the storage. Plus HyperDeck Extreme 8K can now record 4 channels in a single unit! This means any editing system can just log into the network storage and access all the media in one location. DaVinci Resolve 19 can also edit media while it's being recorded!

Record and Playback 8K

The latest Quad Link 12G-SDI allows record and playback in full resolution 8K for amazing quality! The SDI connections are multi-rate, so you can use Quad Link 12G-SDI for 8K, or switch to SD, HD or Ultra HD using the single link 12G-SDI connection. To allow regular CFast cards to be used in 8K, HyperDeck Extreme 8K HDR uses modern H265 files for 8K recording and playback.

Build the Custom Replay System You Need!

Building a high end replay system is easy as it's storage centric, where multiple HyperDecks record and DaVinci Resolve handles the playback. That lets you customize as many channels as you need. Just add extra HyperDeck recorders! That means you can build a replay system in HD, Ultra HD or even 8K. Then add more storage when you need extra space and higher speed.

Big Screen with Touch Control

The innovative touch LCD user interface provides incredible control. You get dedicated buttons for play, stop and record, plus a mini timeline for scrolling through your recordings. The LCD includes display of timecode, video standard, media status as well as audio meters. You can even display real time scopes and focus and exposure assist tools. Plus you can load and save 3D LUTs!
