

# POWERING FACILITIES OF THE FUTURE

Evertz' Software Defined Video Networking (SDVN) solutions build future-proof media facilities with IP. SMPTE ST 2110 video, audio and data streams flow through

Evertz high-capacity switching fabrics, including the NATX and EXE 3.0.

MAGNUM-OS (Evertz' orchestration, monitoring and analysis software) and VUE

(Evertz' UI customization software) give operators full control and visibility of

the IP system to ensure reliable content creation and distribution.
