

Fix it in Live.

When live feeds arrive with different timing, formats, or signal characteristics, they require normalization in real time. FS8 handles the synchronization and processing; OG-FiDO-4 carries SDI over fiber.

FS8

Hybrid SDI/IP Media Processor

The new FS8 frame-sync supports multi-channel processing with SDI and SMPTE ST 2110 connectivity. Advanced features include an easy-to-configure user interface, HDR conversions, IP gateway, Dante audio, low-latency processing, and much more.

OG-FiDO-4

4-Channel openGear SDI/LC Fiber Converters

The OG-FiDO-4 family of SDI to/from fiber openGear cards is a new flexible architecture with 9 variations, including 12G single mode, 3G single mode, and 3G multi-mode LC fiber solutions.
