BAUSCH & LOMB

Series II

CINEPHOR PROJECTION LENSES

are now especially corrected for use with Reflecting Arcs. In line with our usual progressive policy, we recognized the need of a projection lens so modified as to meet the conditions set up by the use of reflecting arc lamps. This lens is now available at all recognized dealers in Series II CINEPHOR sizes. It is characterized by all of the qualities that have made CINEPHORS such great favorites for years. It is made and guaranteed by America's greatest lens manufacturer, the

Unrivaled Quality

The superiority of Eastman Film, both negative and positive, is readily understood.

For in the Kodak Research Laboratories—and they are among the few really great research laboratories in the world—no safeguard that will keep up the unrivaled quality of Eastman Film is overlooked, no effort that may possibly result in an improvement is spared.

The Auditorium of the Edison Lighting Institute

To Members of the Society of Motion Picture Engineers

THE Edison Lamp Works of General Electric Company cordially invites you to visit the Edison Lighting Institute, at Harrison, N. J.

This Institute is dedicated to the advancement of the art and practice of lighting, and is equipped to demonstrate practically every application and type of lighting employed in modern theatres, including different methods or systems used in the projection of motion pictures.

Our engineers who attend meetings of your Society will gladly give you detailed information regarding the services of the Institute and will arrange your visit for you.

If You Show Pictures
You Need The

TransVerteR

TRADE MARK

It "Transverts" alternating current into direct current with four to five times the candle power of an alternating current arc of the same amperage.

Transverter for Mirror Arc Projection

That means—

Less current cost.
Better projection.
Easier operation with
better control.

*Over 2,000
Transverters
in Daily Use*

The Transverter produces steady, direct current
and hence the arc is quiet and constant.

Write for our new Literature on the Transverter.
Sent on request.

 High Intensity

It is the responsibility of this company to meet the needs of exhibitors in every section of this country. In one locality the ordinary arc is still used; in another the incandescent meets the needs of the exhibitor; the reflector lamp is now forging ahead very rapidly, and the high intensity lamp is used in many of the largest theatres.

We have at least two models of each of these types and the exhibitor and projectionist may, therefore, freely make a selection with complete confidence that the distributor is anxious to furnish only that which he feels is best adapted to the needs of a particular theatre or locality.

For nearly a quarter of a century, a period covering the entire commercial history of the motion picture industry, the products of the International Projector Corporation have played a conspicuous part in the development of this field. In our shops were originated and developed the safety devices, ease of operation and light sources of motion picture projectors which permit them to be used with eminently satisfactory results in the motion picture palaces of the world's greatest cities and with dependability in the remote and isolated parts of the globe.

Manufacturers—

WE'RE constantly receiving letters from theatre owners, builders, architects, supply dealers and even picture producing company executives, praising Theatre Building & Equipment Buyers Guide and requesting extra copies. They want to know when the next edition will be printed.

This Semi-annual has hit the keynote of what is demanded of theatre building and equipment publications in the motion picture field. Its success has been phenomenal.

From a publishing standpoint, Buyers Guide is of such high standard that it reflects quality on the products presented through its advertising pages.

Furthermore, products not advertised in Buyers Guide do not get full recognition by this industry. And by industry we include architects who specialize in theatre work.

The spring edition of Buyers Guide will be published next May. Make your plans now to be represented among its advertising pages.

SINCE 1914

A sun for the stars

JUST as the stars shine at night because the sun lights them, so the motion picture stars twinkle and shine on the screen because sunlight makes them live for their audiences. For the arc that springs across a trim of National Projector Carbons is a tiny replica of the sun, brilliant, powerful, steady, possessing the proper color values for getting all that is in the film over to the screen and into the hearts of the audience.
