**The "NEWS" is the leading trade
paper in the industry.**

This is not a claim—it is a fact.

There are in all not over
14,000 theatres showing pic-
tures today.

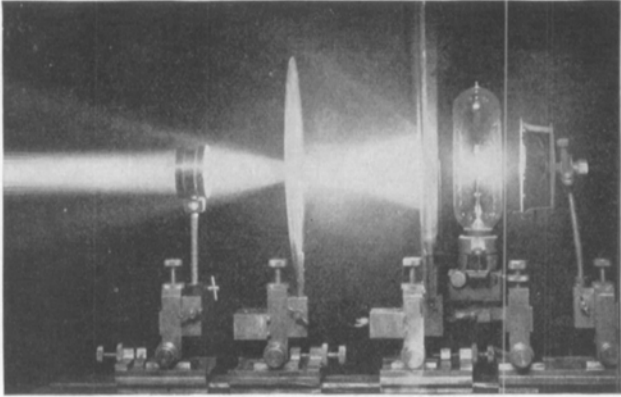

8132 individuals and cor-
porations controlling 12,500
theatres pay their subscrip-
tions to the NEWS and have it
delivered to them each week.

This comes very near "sub-
scription saturation" — $12\frac{1}{2}$
out of every 14 houses. A
record to be proud of.

TransVerteR

TRADE MARK

The Motor Generator That Produces Perfect Arcs

All Arcs in Series, Two or More
Any Two Simultaneously, Same Amperes in Each Arc

Gives a Perfect Dissolve

TransVerteR (double arc type), furnishes two perfect arcs in series simultaneously. Each is of the same amperage and light value.

In striking the second arc the one showing is not disturbed in the slightest degree. This gives a perfect dissolve. No ballast is used as automatic voltage is provided.

The projectionist, by a slight turn of a convenient control handle, can instantly increase or decrease the amperage generated and furnished to the arc, thus obtaining the light best adapted for the film being shown.
